

Smart Bracket for TNA-305X

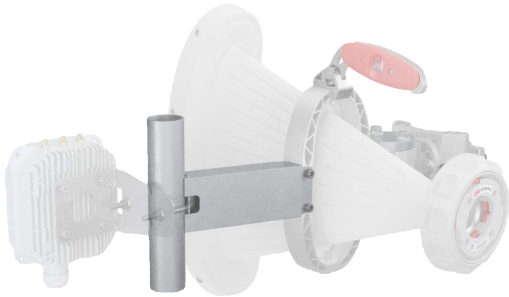

MOUNTS Tachyon TNA-305X WITH ASYMMETRICAL HORN ANTENNAS

The BR-WG3 Smart Bracket adds a dedicated mounting point that allows the Tachyon TNA-305X to be installed directly on RF elements Asymmetrical Horn Antenna. This creates a clean, space-efficient setup ideal for deployments where a 90° Asymmetrical Horn serves as a failover 5/6 GHz antenna and as a supporting mounting structure.

Once mounted, the Tachyon TNA-305X can be aligned in azimuth and elevation together with the horn, ensuring precise and coordinated positioning. The horizontal mounting orientation also saves valuable vertical tower space, enabling more efficient stacking of equipment.

BR-WG3 is compatible with any RF elements Asymmetrical Horn Antenna featuring the structural aluminum ring.

Although BR-WG3 was designed specifically for the Tachyon TNA-305X, its platform offers broad compatibility. It can also mount various devices such as 60 GHz access points, cameras, IoT sensors, other compact CPE or radio units.
